*Solving systems of equations using elimination*  
**Review of Elimination**

1)  $12x + 2y = -26$   
 $6x - 9y = -3$

2)  $-6x - 8y = 10$   
 $2x - 4y = 10$

3)  $-7x - 8y = -19$   
 $7x + 10y = 29$

4)  $-3x + 2y = -18$   
 $8x - 2y = 28$

5)  $-4x + 7y = 8$   
 $-3x + 4y = 6$

6)  $-3x - 6y = 3$   
 $-7x + 10y = -17$

7)  $y = 4x - 11$   
 $4x - y = 11$

8)  $2x + y = 7$   
 $-2x - y = 6$

9)  $-2x - 5y = 17$   
 $y = -4x + 11$

10)  $2x - 4y = 24$   
 $-6x + 4y = -24$
